Sean Bostic

Application Developer at Citizens Bank
Cleveland/Akron, Ohio Area

Summary

I am a driven problem solver who enjoys utilizing software to create innovative solutions. My main focus is the Windows stack but I enjoy learning new and emerging technologies including various JavaScript frameworks, Python, and mobile application development.

Over the past year I have gained an extensive interest in distributed ledger technology. I have a vast belief in the digital asset XRP and the company, Ripple, and their software products. Currently hosting a Codius host and hope to run a validator node soon.

Experience

Citizens Bank
Application Developer
June 2016 - Present
Cleveland/Akron, Ohio Area

• Work with a highly customized version of "Empower for .NET" using C#, .NET framework, & SQL.
• Monitor system and provide resource for defect fixes, debugging, or creation of new functionality.
• Dev Ops role of maintaining source control of several branches including but not limited to QA testing, product development, and production level code base.
• Responsible for code promotions to all environments including production level environments.
• Creating SSIS tasks to further reporting capabilities for business line.

Assurex Health
Software Developer
January 2015 - September 2015 (9 months)
Mason, Ohio

• Member of an Agile Product Development team which delivered a "greenfield" web application to scientists to better monitor genetic readings from lab equipment.

- Developed and wrote code using C#, .NET framework, JavaScript, SQL.
- Gained full-stack experience working with back-end and front-end technologies.
- Discussed highly scientific topics with doctors, lab technicians, and scientists to further develop software which streamlined data analysis of genetic amplification.
- Practiced Agile Software Development, lead sprint retrospective meetings, and attended daily stand up meetings.

Seapine Software
QA Analyst
July 2013 - August 2014 (1 year 2 months)
Mason, Ohio

- Part of the QA team of the company's main software products TestTrack, Surround SCM, and QAWizard.
- Assigned as the main tester for integration of third-party software with TestTrack.
- Found over 100 defects of major severity which were critical to the product's development.
- Created over ten different Linux distribution based test environments.
- Configured and maintained RDBMS connections with SQL, Oracle, and PostgreSQL.
